

eduTrac SIS Premium

eduTrac SIS (etSIS) is easy to install especially now that installation and upgrades have been moved to a command line interface. But unfortunately, not all server setups are the same and misconfigured environments could delay installation and setup. For this very reason, the eduTrac SIS Premium setup solution is offered.

Purpose

The purpose of the perfect server setup is to get you up and running without the hassles.

Why DigitalOcean?

1. 7 Media uses DO for all its server needs.
2. DO is trustworthy and has a 99.9% uptime rate.

Why ISPConfig3?

7 Media has been using this control panel for years. It is secure, it is maintained, it is has been tested on many different distros, and it is opensource. To learn more about ISPConfig3, checkout their [website](#), and you should also get a hold of the [manual](#). Paying \$5 is worth it.

How it Works?

1. First, you will need to setup a new account at [DigitalOcean](#) (affiliate link). It is your server, but you are using 7 Media to do the setup. The \$20/month should suffice, but recommend \$40.
2. Second, if you haven't done so already, choose the [eduTrac SIS Premium](#) option, and checkout.
3. Third, log into your account, and create a new ticket from your dashboard. In the ticket, include your DO account login details as well as the new terminal login details.
4. Fourth, once your server and etSIS installation is complete, the server and login details will be turned over to you.
